

SmartFlow

Intelligent Content
Management and Business
Process Digitalization Platform
(ECM, CSP, BPM)

We design, deploy, and support IT products

SmartFlow **Core Capabilities**

✓✓ Store digital content in a single repository

✓✓ Digitalize business processes

✓✓ Create a unified digital workspace

✓✓ Reduce recruiter user journey by through faster decision-making and fewer clicks

up to 80%

automate
of routine operations

up to 40%

save working time

by 2–3x

reduce document
processing time

SmartFlow Platform Advantages

Form bilder

Flexibility

Visualization and personalization

Real-time dashboards Personalized user workspaces

Intelligence

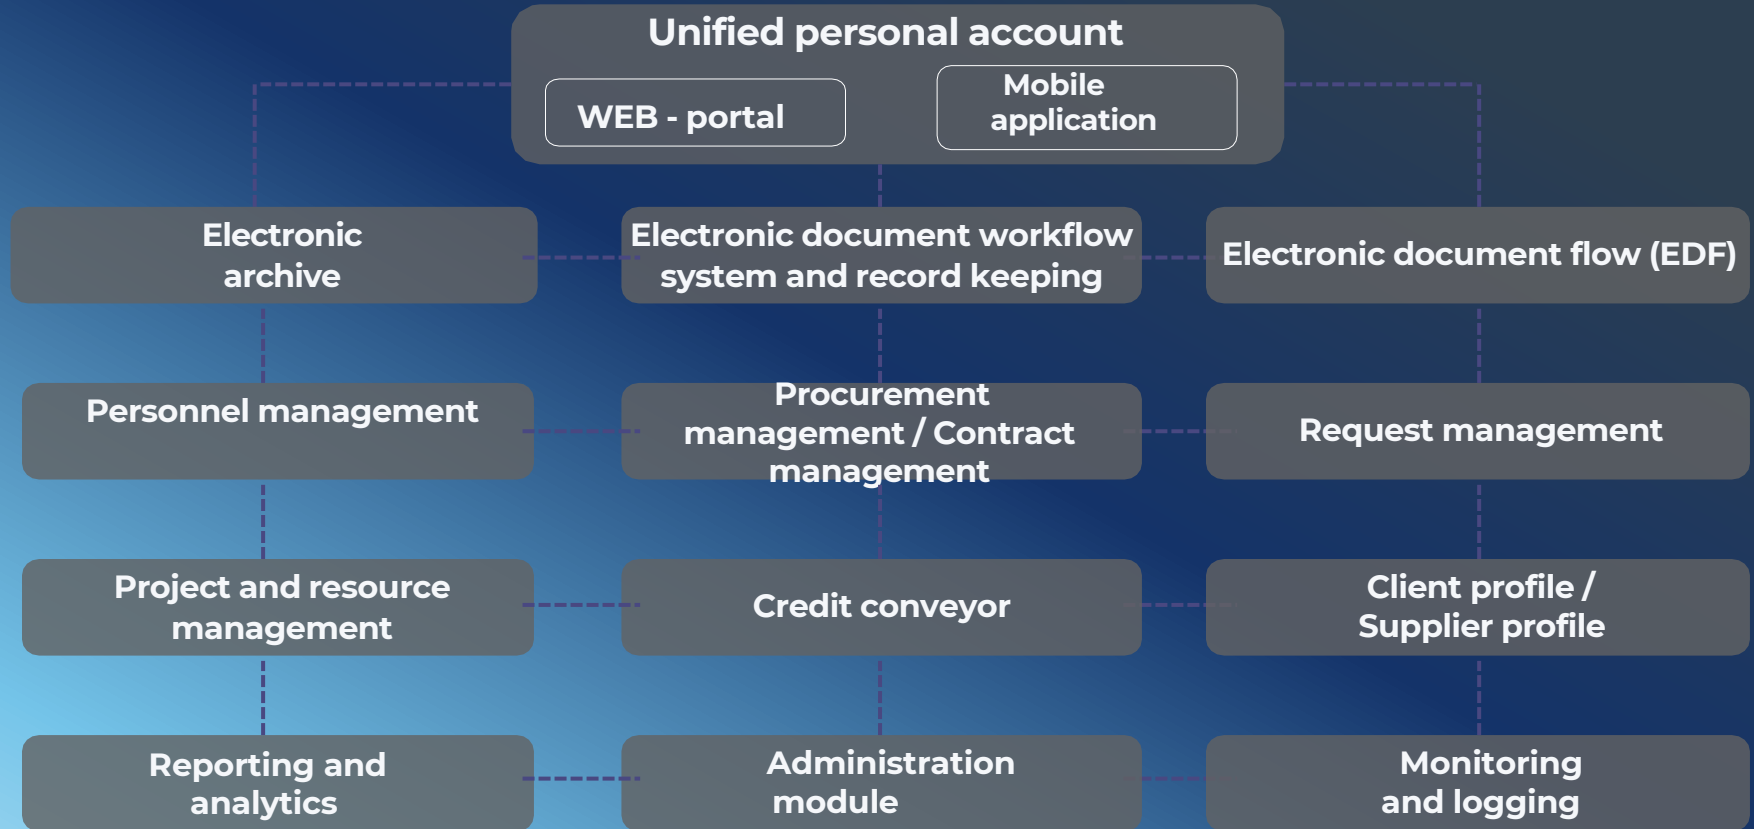

Data extraction and automatic document classification using AI

Additional Features

- Electronic document signing
- Open universal API
- Scalability
- Performance and fault tolerance under high loads
- Cross-platform support (Windows, Linux, Astra Linux, and other systems)
- Interface branding, individual approach, white label

Business Modules **SmartFlow**

choose all or one

Smart Platform

data-driven decisions and insights

Document Automation

- Recognize and extract data from any document
- Classify and auto-populate cards
- Create pre-filled forms using OCR
- Calculate relationships between different documents

Auto-assign tasks

- Recommend assignees using ML models
- Analyze user actions and optimize routing

Intelligent Content Analysis

- Analyze document content and extract key information
- Categorize data and derive meaning from context
- Suggest templates and auto-generate draft documents

Intelligent Search

- Search across document cards and file content
- Account for semantics and Russian language rules
- Full-text search via Elasticsearch

SmartFlow Microservices

High Fault Tolerance

- Issues in individual services do not affect the entire workflow
- Problems are quickly identified and resolved

Flexibility

- Changing one service does not risk system-wide failure
- Reduced time for implementing changes

Ease of Maintenance

- Each service is a fully functional mini-system
- No need to understand details unrelated to a specific function

Fast Deployment

- Less code when scaling services
- New functionality can be quickly and easily moved into production

Scalability

- Horizontal and vertical scaling
- Each service can be supplemented and expanded at any time

Intelligent Tools

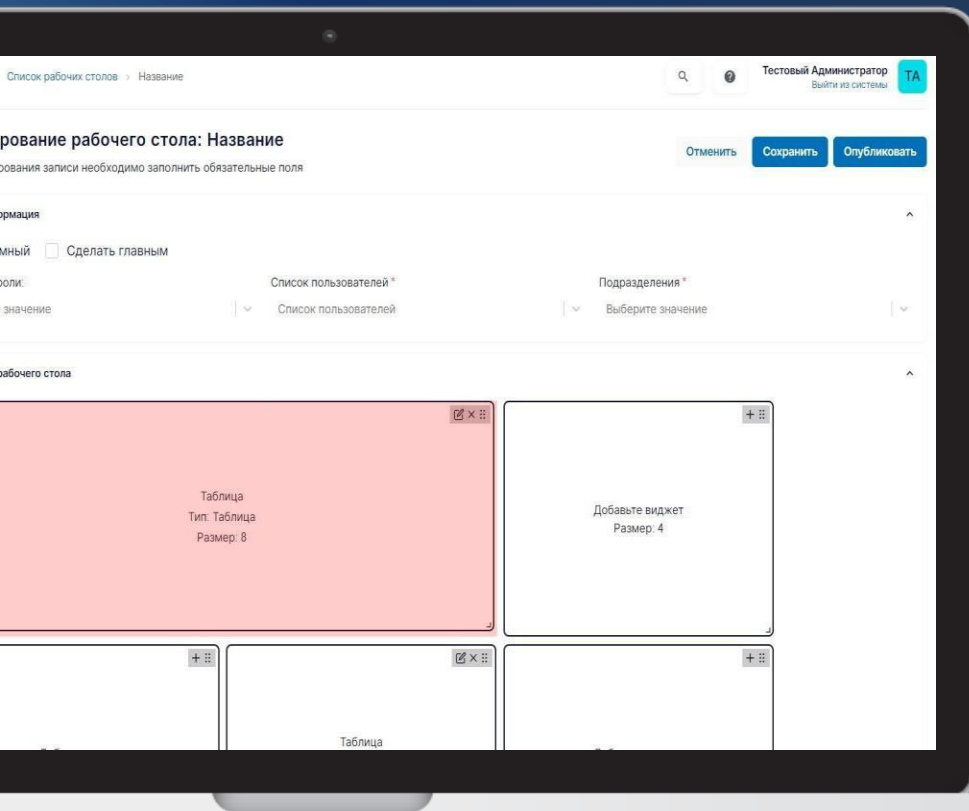

- ✓✓ Built-in flexible tools for configuring the platform without coding – a set of visual builders
- ✓✓ Document recognition, data extraction, and automatic document classification service using AI
- ✓✓ Flexible configuration of business rules, access rights, and digital content display structure

Visual Builder Capabilities

- ✓✓ Vendor independence for system maintenance and support
Thanks to a large number of built-in visual builders on the platform
- ✓✓ Reduced development and implementation costs. Ability to involve people with basic programming skills
- ✓✓ Reduced development time when modifying or adding new processes and evolving the system

Platform Visual Builders

Configuration Without Coding

- **Business process builder**
- **Form / document card builder**
- **Directory builder**
- **Roles builder**
- **Data visualization builder (dashboards)**
- **Notifications builder**
- **Object registration number builder**
- **Report / print form builder**

See how it works for your business

Let's start with an introductory meeting
- we'll discuss your goals and explore the possibilities

Introductory Meeting

Discuss your objectives, demonstrate capabilities, assess applicability

1-2 hours • Free

Solution Demo

Show functionality with examples, answer your questions

2-3 hours • Using your data

Pilot Project

Deploy on a limited perimeter, train your team, evaluate results

2-4 weeks • First results

Rollout

Deploy organization-wide, technical support, continuous improvement

Ongoing • SLA 99.9%
